

Chameleon MultiCloud Archivelink

Chameleon MultiCloud ArchiveLink is the only Multicloud solution that connects your SAP systems to the main cloud storage systems.

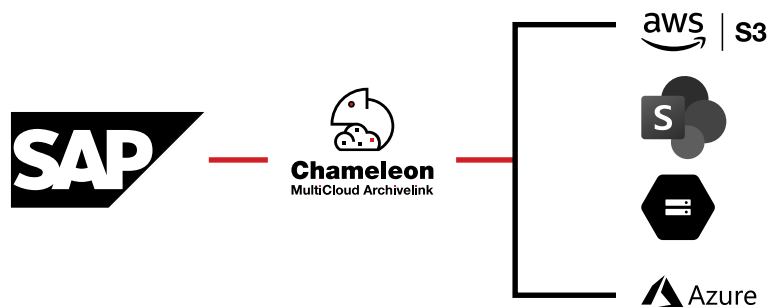

It integrates the SAP document management system into cloud repositories, increasing storage alternatives –ArchiveLink/Archiving– and reducing costs and operations.

The only Multicloud ArchiveLink in SaaS mode on the market

Companies that use SAP systems, in order to migrate document objects from a SAP system to a cloud storage system, usually need different tools. Furthermore, the metadata that enables the access to migrated data in a transparent way are not transferred.

Now they can choose. They can store documents from SAP to the most common repositories, including low-cost ones. With a single tool they can store the documents in multiple repositories and allow users to access these documents without having to change anything in their SAP systems.

One-click migration between repositories without making any changes to your SAP system.

A single Multicloud tool to manage documents in any cloud storage system.

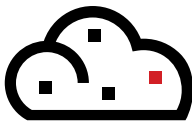

It allows you to store documents attached to SAP business objects (Orders, Invoices, Customers, Suppliers, etc.) in the most used cloud document repositories.

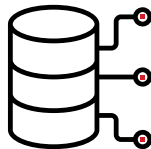

Outstanding Functionalities

It improves ArchiveLink functionalities, adding the possibility to manage stored documents in a more contemporary and efficient way. One-click migration of documents from one repository to another.

- Storage of documents –ArchiveLink– and files –SAP Archiving– in low-cost cloud repositories.
- Immediacy: minimal, fast and easy configuration that allows to set up a cloud repository in SAP in just a few minutes.
- High performance in ArchiveLink and Archiving scenarios.
- Grouping of documents with parameterisable criteria.
- Documents stored together with their parameterisable metadata.
- Non-SAP users access to stored documents according to the criteria defined in the metadata
- Full traceability of access –Read/Write– of stored documents or files.
- Storage capacity in different types of repositories: long-term, cold storage, GDPR-compliance, deep archive.

Multicloud. Store documents and files in different cloud storage systems.

Metadata: Complete management of parameterisable metadata associated to the documents.

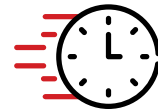

Access: Non-SAP users can access documents according to the criteria reflected in the metadata: searches, lists, etc

Trazabilidad: Log de acceso – lectura/escritura – de los documentos o archivos almacenados

Flexibility: Available as SaaS or On-prem installation.

Speed: Immediate set-up and fast ArchiveLink/SAP Archiving response.
